

Current patterns in genetic resource flows and trade

Monday 6 April 2009, 13:15 - 15:00
Room IX (SS1)

Information on past and current patterns of genetic resource flows is crucial to understand how an ABS regime will affect different countries and regions. Where do key agricultural genetic resources come from and how are they accessed today?

An ABS regime has also implications for trade in products derived from genetic and/or biological resources. How do regulatory measures, such as those proposed for the IR, impact trade? What are the factors needed to stimulate trading in bio-products?

Moderator: Kees Noome, Limagrain
